The diagram illustrates a vehicle chassis with various suspension components. A central differential housing is mounted on a horizontal axle. Coil-over assemblies are positioned above the differential, and lower control arm (LCA) brackets are mounted below it. A red line connects the LCA bracket on the left to a label 'LCA BRACE'. A yellow line connects the LCA bracket on the right to a label 'BOTTOM BRACE'. Four measurement points are indicated by gray boxes: 'AXLE FLANGE TO AXLE FLANGE' at the top, 'HOUSING END TO HOUSING END' below it, 'COIL OVER BRACKETS (CENTER TO CENTER)' below that, and 'LCA BRACKETS (OUTSIDE TO OUTSIDE)' below the chassis. The chassis itself is a horizontal bar with various mounting points and a central differential housing. The LCA brackets are V-shaped structures mounted below the chassis. The coil-over brackets are Y-shaped structures mounted above the differential housing. The measurement lines are black, except for the red and yellow lines connecting to the LCA and bottom braces.
